

ASSIGNMENT 2-AKASH B

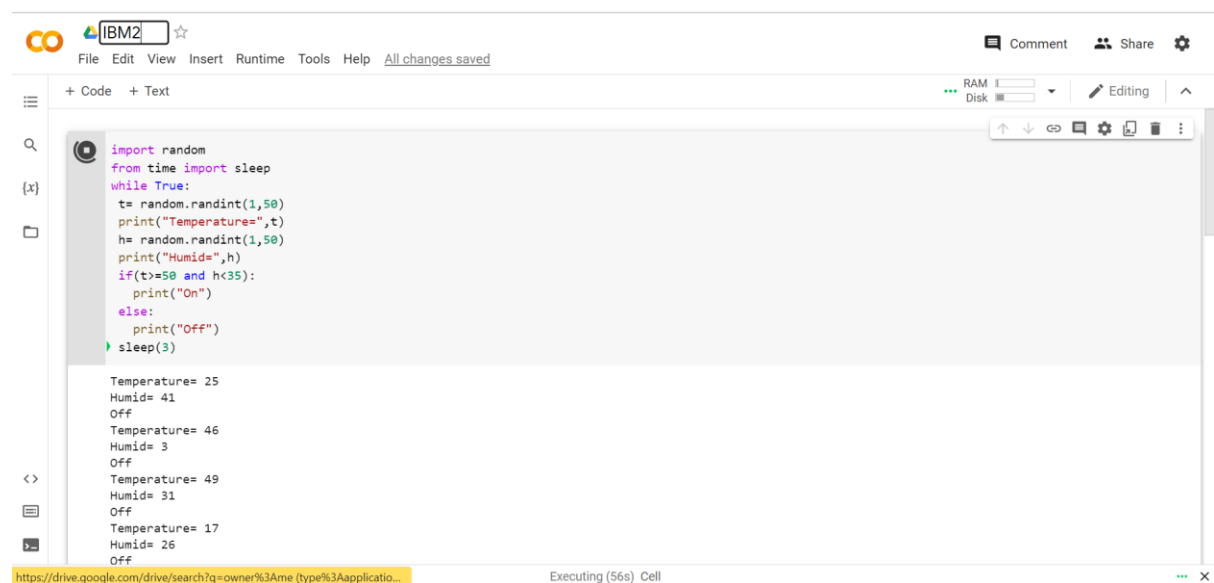

727719EUEC008

Temperature and humidity sensing and alarm automation

CODE:

```
import random
from time import sleep
while True:
    t= random.randint(1,50)
    print("Temperature=",t)
    h= random.randint(1,50)
    print("Humid=",h)
    if(t>=50 and h<35):
        print("On")
    else:
        print("Off")
    sleep(3)
```

OUTPUT:

The screenshot shows a Jupyter Notebook interface with a code cell and its output. The code is as follows:

```
import random
from time import sleep
while True:
    t= random.randint(1,50)
    print("Temperature=",t)
    h= random.randint(1,50)
    print("Humid=",h)
    if(t>=50 and h<35):
        print("On")
    else:
        print("Off")
    sleep(3)
```

The output of the code is as follows:

```
Temperature= 25
Humid= 41
Off
Temperature= 46
Humid= 3
Off
Temperature= 49
Humid= 31
Off
Temperature= 17
Humid= 26
Off
```

The interface includes a top bar with the IBM logo, a search bar, and navigation links. The left sidebar shows the file explorer and code editor tabs. The bottom status bar indicates the execution time (56s) and the current cell.
